

## MILJO SCREEN

Returning to the office post-covid was always set to be a challenge for many business owners. To make returning simpler and safer, Agilita has developed a fully sustainable desk divider with one of our dealers.

There were 2 main goals as we created Miljo. How do we eliminate the amount of perspex that was being used and how can we quickly make offices safe again?

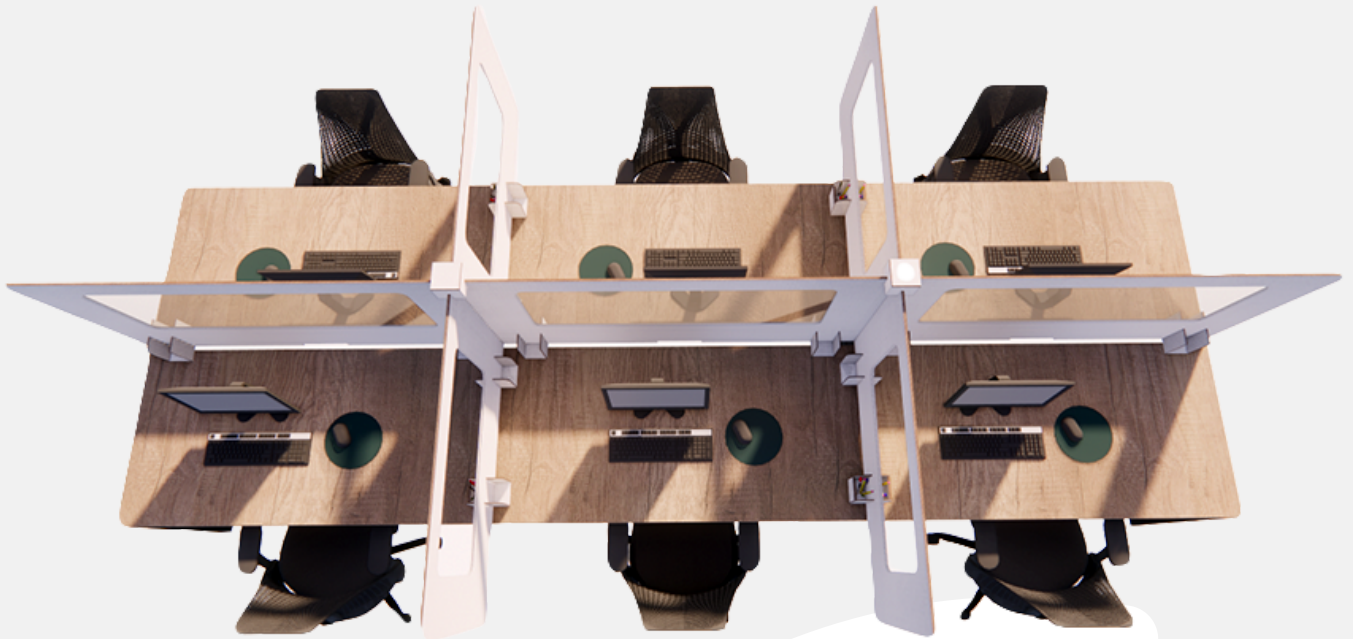

Miljo is economically friendly, 100% recyclable as well as being manufactured using over 80% recycled raw material. The frame is made from a twin-wall cardboard construction which naturally kills any virus and germs on it within just 24 hours.

As design specialists, we meticulously thought of every element of Miljo's design. We wanted to ensure staff didn't feel too 'closed in' but still felt fully protected, so designed in some clever, clear vision panels. These allow staff members to communicate effectively and stay safe, whilst feeling restricted.
