

Spec Sheet: Hivewrap

The perfect combination of flexibility and presentation in a protective wrapping system, our 100% recyclable hivewrap packing system is an eco-friendly, cost-effective, aesthetically pleasing alternative to bubble wrap. The hive shaped cells interlock together to firmly secure a wide range of products and due to its unique design, it does not require tape or glue.

Hivewrap is ideal for wrapping a wide range of products such as gifts, retail, cosmetics, ceramics, homeware, confectionery and much more. It can be used as a standalone paper wrap, or with tissue paper. Its expandable honeycomb structure and natural kraft look are perfect for customer experience and are sure to protect products.

Perfectly mouldable around products, it can be used for individual items or bundles, by wrapping and rolling them as you go with the dispensed hivewrap paper. Due to its flexibility, it can be used for awkwardly shaped products and twisted and wound into any direction to protect handles, sharp and irregular edges and much more. Fast and easy to pack, not only does it reduce pack time, but it also reduces breakages.

Benefits of hive wrap:

- 100% recyclable
- Biodegradable
- Highly protective meaning reduced breakages and returns
- Increased speed and efficiency of wrapping over traditional alternatives
- Clings to itself, requiring no tape or glue
- Easily torn by hand

Specifications	
Product codes	PA-WRAP-400X250 ; PA-WRAP-500X250
Roll width (mm)	400/500
Roll length (m)	250
Material	100% recyclable 80gsm Kraft paper roll
Roll diameter (mm)	200
Internal core diameter (mm)	38
